

# Why use **SenseAlert+** to support falls management?

The SenseAlert+ Falls Reduction Programme is a solution offered by Alert-iT to help in reducing the risk factors of falls on wards. The SenseAlert+ is designed for the use in hospitals, offering a range products and support, with management reporting. Our sensors can detect whether someone is in bed, out of bed or needs assistance.

Alert-iT designed this infrastructure to support Plesio-care (local carer) by providing technology, education, support and commitment. This special program combines the use of Alert-iT's innovated monitoring systems designed specific to your needs with ongoing support and maintenance and management reporting.

*“A good Falls Reduction Programme is NOT just about technology”*

This Falls Reduction Programme can be easily adapted to suit specific needs for a fixed price which can include:

- Appropriate monitors from our range
- Installation and training
- Visits to maintain the culture change and ensure effective implementation
- Ip-iT “Black box recorder”, management of reporting which logs the number of calls, the location of the call and response time

The process for the Falls Reduction Programme contains seven steps.

### Key points:

- Flexible solutions for various environments and wards
- Specifically designed for the NHS and hospital environments, with input from ward managers in various trusts across the UK.
- Account manager support
- Technical support line
- Allows the carer to provide care for several patients at once
- Three-year warranty upon product registration (bed mat and Chair mat 1 year)
- Microbial finish to reduce the possibility of infection
- Silent alarms can be sent to carer so patients are not disturbed.
- Pagers are designed to be robust for everyday use. Up to 100 hours charge
- Long range Radio pager.
